Corent

MyEKC
employee knowledge center

Corent delivered an innovative *Employee Knowledge Center* as a fully instrumented SaaS offering on Microsoft Azure

MyEKC is an employee engagement and management service (SaaS) for small businesses that can be tailored to the company and to every user. MyEKC's Employee Knowledge Center is used to store, communicate, and train all company operations so that every employee knows what to do and how to do it.

BUSINESS CHALLENGES

➤ Need for a fast and affordable route to SaaS

➤ To be achieved without developing their own SaaS deployment and management capabilities

➤ Choose a Trusted Cloud platform, meeting end-customer compliance requirements

➤ Implement a "cost-effective" operational model with a high degree of customer self-service

### PRODUCT USED

SaaSOps® on Microsoft Azure

SaaSOps® transforms your software to a SaaS solution by adding tenancy, business, and operations services. Now your application can be delivered as a Service on Azure. You can choose from Virtual, Hybrid to Multi-tenancy and define your own Commercial and Operations Services to fit your business needs.

Tenancy Management
Multi-Tenancy Transformation

App Management
Single or Multiple Apps

Service Operations
Monitoring, BI and Control, Franchise Management

Monetization

MyEKC application was SaaS-enabled using Multi-Tenancy model by SaaSOps

BUSINESS BENEFITS

➤ Faster time-to-market with SaaS on Azure

➤ Different Tenancy models meeting end-customer requirements

➤ No large CAPEX investment

➤ No technology lock-in

➤ Available for existing applications and newly developed Cloud applications

RESULT

With the SaaSOps' advanced SaaSification and SaaS management technologies, MyEKC is now able to offer customers their own private MyEKC application with a custom URL to document, store, and communicate all business operations in one secure location. It was achieved using a cost-effective Multi-Tenancy deployment model running on Microsoft Azure, meeting current MyEKC customer demand for easy accessibility, security, and compliance. MyEKC assigns, communicates, and tracks all employee processes, company policies, job requirements, tasks, and more to create engagement and accountability from top-down to bottom-up.

SaaS Deployment Model in 3 Steps – Achievable Within Weeks:

SaaSification	Business Setup	Onboard Customers
Install Application on Azure	Add your Own Banners, T&C's and Onboarding Process	Setup Customer Account
We Assess your Application	Setup your Subscription Model	Customer Subscribes to Product
You Choose your SaaS Model: VT/HT/MT	Setup your Metering for Billing Information	Customer Receives Access Credentials (via) Email
We SaaSify your Application	Setup your Azure Provisioning Models and Scaling	Customer starts using Application on Azure
