Microsoft has announced End-of-Life (EOL) support for SQL Server 2008. Migrating the SQL Server and its data is important for Enterprises to ensure the Business Continuity of their operations.

Now you can seamlessly migrate the SQL Server 2008 from on-premises (or from AWS) to the latest version of SQL Server or re-platform it into a PaaS service available on AWS using Corent's MaaS.

How MaaS (Migration as a Service) Helps:

MaaS helps you perform a rapid assessment of SQL Server 2008 (or any later versions) along with its associated applications/servers and provides relevant migration advisories to migrate them to AWS. Advisories provided include both migrating SQL Server to the latest version or an equivalent PaaS service available on AWS. Based on these advisories, SQL Server and its associated applications can be migrated to AWS using Corent's MaaS Smart Shift Capabilities.

MaaS Solution for Migrating SQL Server to AWS
