Cloud Migration
Strategies

Cloud Architectures   Cost Comparison

Business Challenges:

» Difficult to get the Cloud information required in-hand to analyze your application and plan for Cloud migration.

» Cloud related information are abundant, but are scattered. More challenging to model private Clouds.

» Difficult to keep track of the changes in the market such as Cloud's compliances, performance, size, and PaaS capabilities.

» Accessing information about various Cloud features relevant for your application is tough, even more difficult is aggregating workload information.

Solutions:

✔ Learn and reuse any complex information about Clouds and applications as the tool usage increases in your environment.

✔ SIs and MSPs/CSPs/HSPs can differentiate and brand their Cloud migration solution by tuning the knowledge base for their enterprise customer in their respective domains.

✔ Rapidly update and maintain latest information available about various Clouds and workloads in a single location.

✔ Flexibility to introduce new knowledge that can be accessed by multiple customers for their different applications.
