

# DYNAMIC WHAT-IF SCENARIOS

Explore your Cloud choices and its benefits.

Create multiple Cloud plans and navigate to the exact migration plan that suits your objectives. Adopt the right workload configuration for Cloud migration. Model the application architecture, operational functions, Cloud and services cost before migration with SurPaaS' automated application analysis.

## Business Challenges:

- » Assessing performance and expenses for application with complex workloads are difficult.
- » Exploring various workload configuration possibilities in the Cloud is challenging.
- » Manual prediction of optimizing application architecture is time consuming and difficult in case of multiple applications.
- » Tough to discover new architecture possibilities for your business needs including disaster management, high performance, etc.

## Solutions:

- ✓ Create different scenarios and analyze your application without disturbing its work environment (on premises or data center).
- ✓ Predicts the performance of the application workloads and publishes the resource efficiency ratings for the Cloud.
- ✓ Dynamically foresee the cost of the topology, analyze the operation of your application in diverse angle for any scenario.
- ✓ Create multiple what-if scenarios and choose the one that works for you.
