Explore multiple Cloud migration strategies

Business Challenges:

» Difficult to assess your application architecture and workloads.

» Hard to recognize the operational dependencies of your application.

» Time consuming to create your own Cloud migration plan.

» Challenging to optimize your Cloud resources and expenses.

» Tedious to fulfill all objectives of your application migration to the Cloud.

Solutions:

✔ Analyzes your application within minutes and provides a detailed map of its architecture and workloads (web servers, databases, middlewares, frameworks, services, etc.).

✔ Provides a comprehensive overview about the dependencies in your application and helps swiftly migrate your application to the Cloud.

✔ Helps you decide on changes to the existing application architecture for optimal operations on the Cloud.
