

Multi-Cloud Migration

Freedom in migrating to the Cloud the way you want !!

Enjoy multiple choices and more flexibility with Multi-Cloud migration.

Migrate and distribute your application and its workloads across various Clouds of your choice for better optimization. Also migration from Cloud to Cloud is simple and easy.

Business Challenges:

- » Inability to run your applications on different infrastructure as a service (IaaS) platforms, based on the applications' unique needs.
- » Inability to utilize different platforms and constantly changing packages of capabilities from different Clouds.
- » Mitigating application downtime and data loss risks is extremely important for businesses.

Solutions:

- ✓ Deploy some application workloads on-premises and others on one or more public/private Clouds.
- ✓ Explore a variety of possibilities, such as security, performance or cost optimization with multiple Clouds.
- ✓ Helps you to deploy your applications on a Cloud closer to your customer's geographical location.
- ✓ Helps you to create a scalable and compliant application setup.
