ANALYZE CLOUDIFY SaaSIFY

Smart and Swift Shift

Cloud migration made easy, automated, and effortless.

Your application migration to Cloud is amazingly Quick and Swift. Yeah, Smart as well.

Analyze your application workloads, swiftly migrate the application to the Cloud by smartly re-architecting the deployment topologies. Facilitates the creation of multiple architectures and select the best one to suit your scalable business needs.

Launch Redeployed Workloads

Business Challenges:

» Movement of application related data to the Cloud is a great challenge.

» Re-architecting the deployment topologies and selecting the best topology that suits your scalable business is difficult.

» Defining and strategizing your own migration plan, configuring firewall, security and workload is tough.

» Consumes more time and resources to shift an application.

Solutions:

✔ Re-architect the deployment topologies by leveraging the in-depth analysis of your application's micro-workloads.

✔ Utilize the extensive scripting capability to perform any required tasks.

✔ Configure workload, firewall, security, synchronization of files and pause in-between migration.

✔ Infrastructure provisioning for migrating the workloads to the Cloud from your on premises servers.
